
A-level Further Maths

Introduction to radians

This is a PDF version of the lesson. To access the narrated version, with worked examples and solutions, please follow the link below.

[Further maths.pptx](#)

Trigonometry

This video covers:

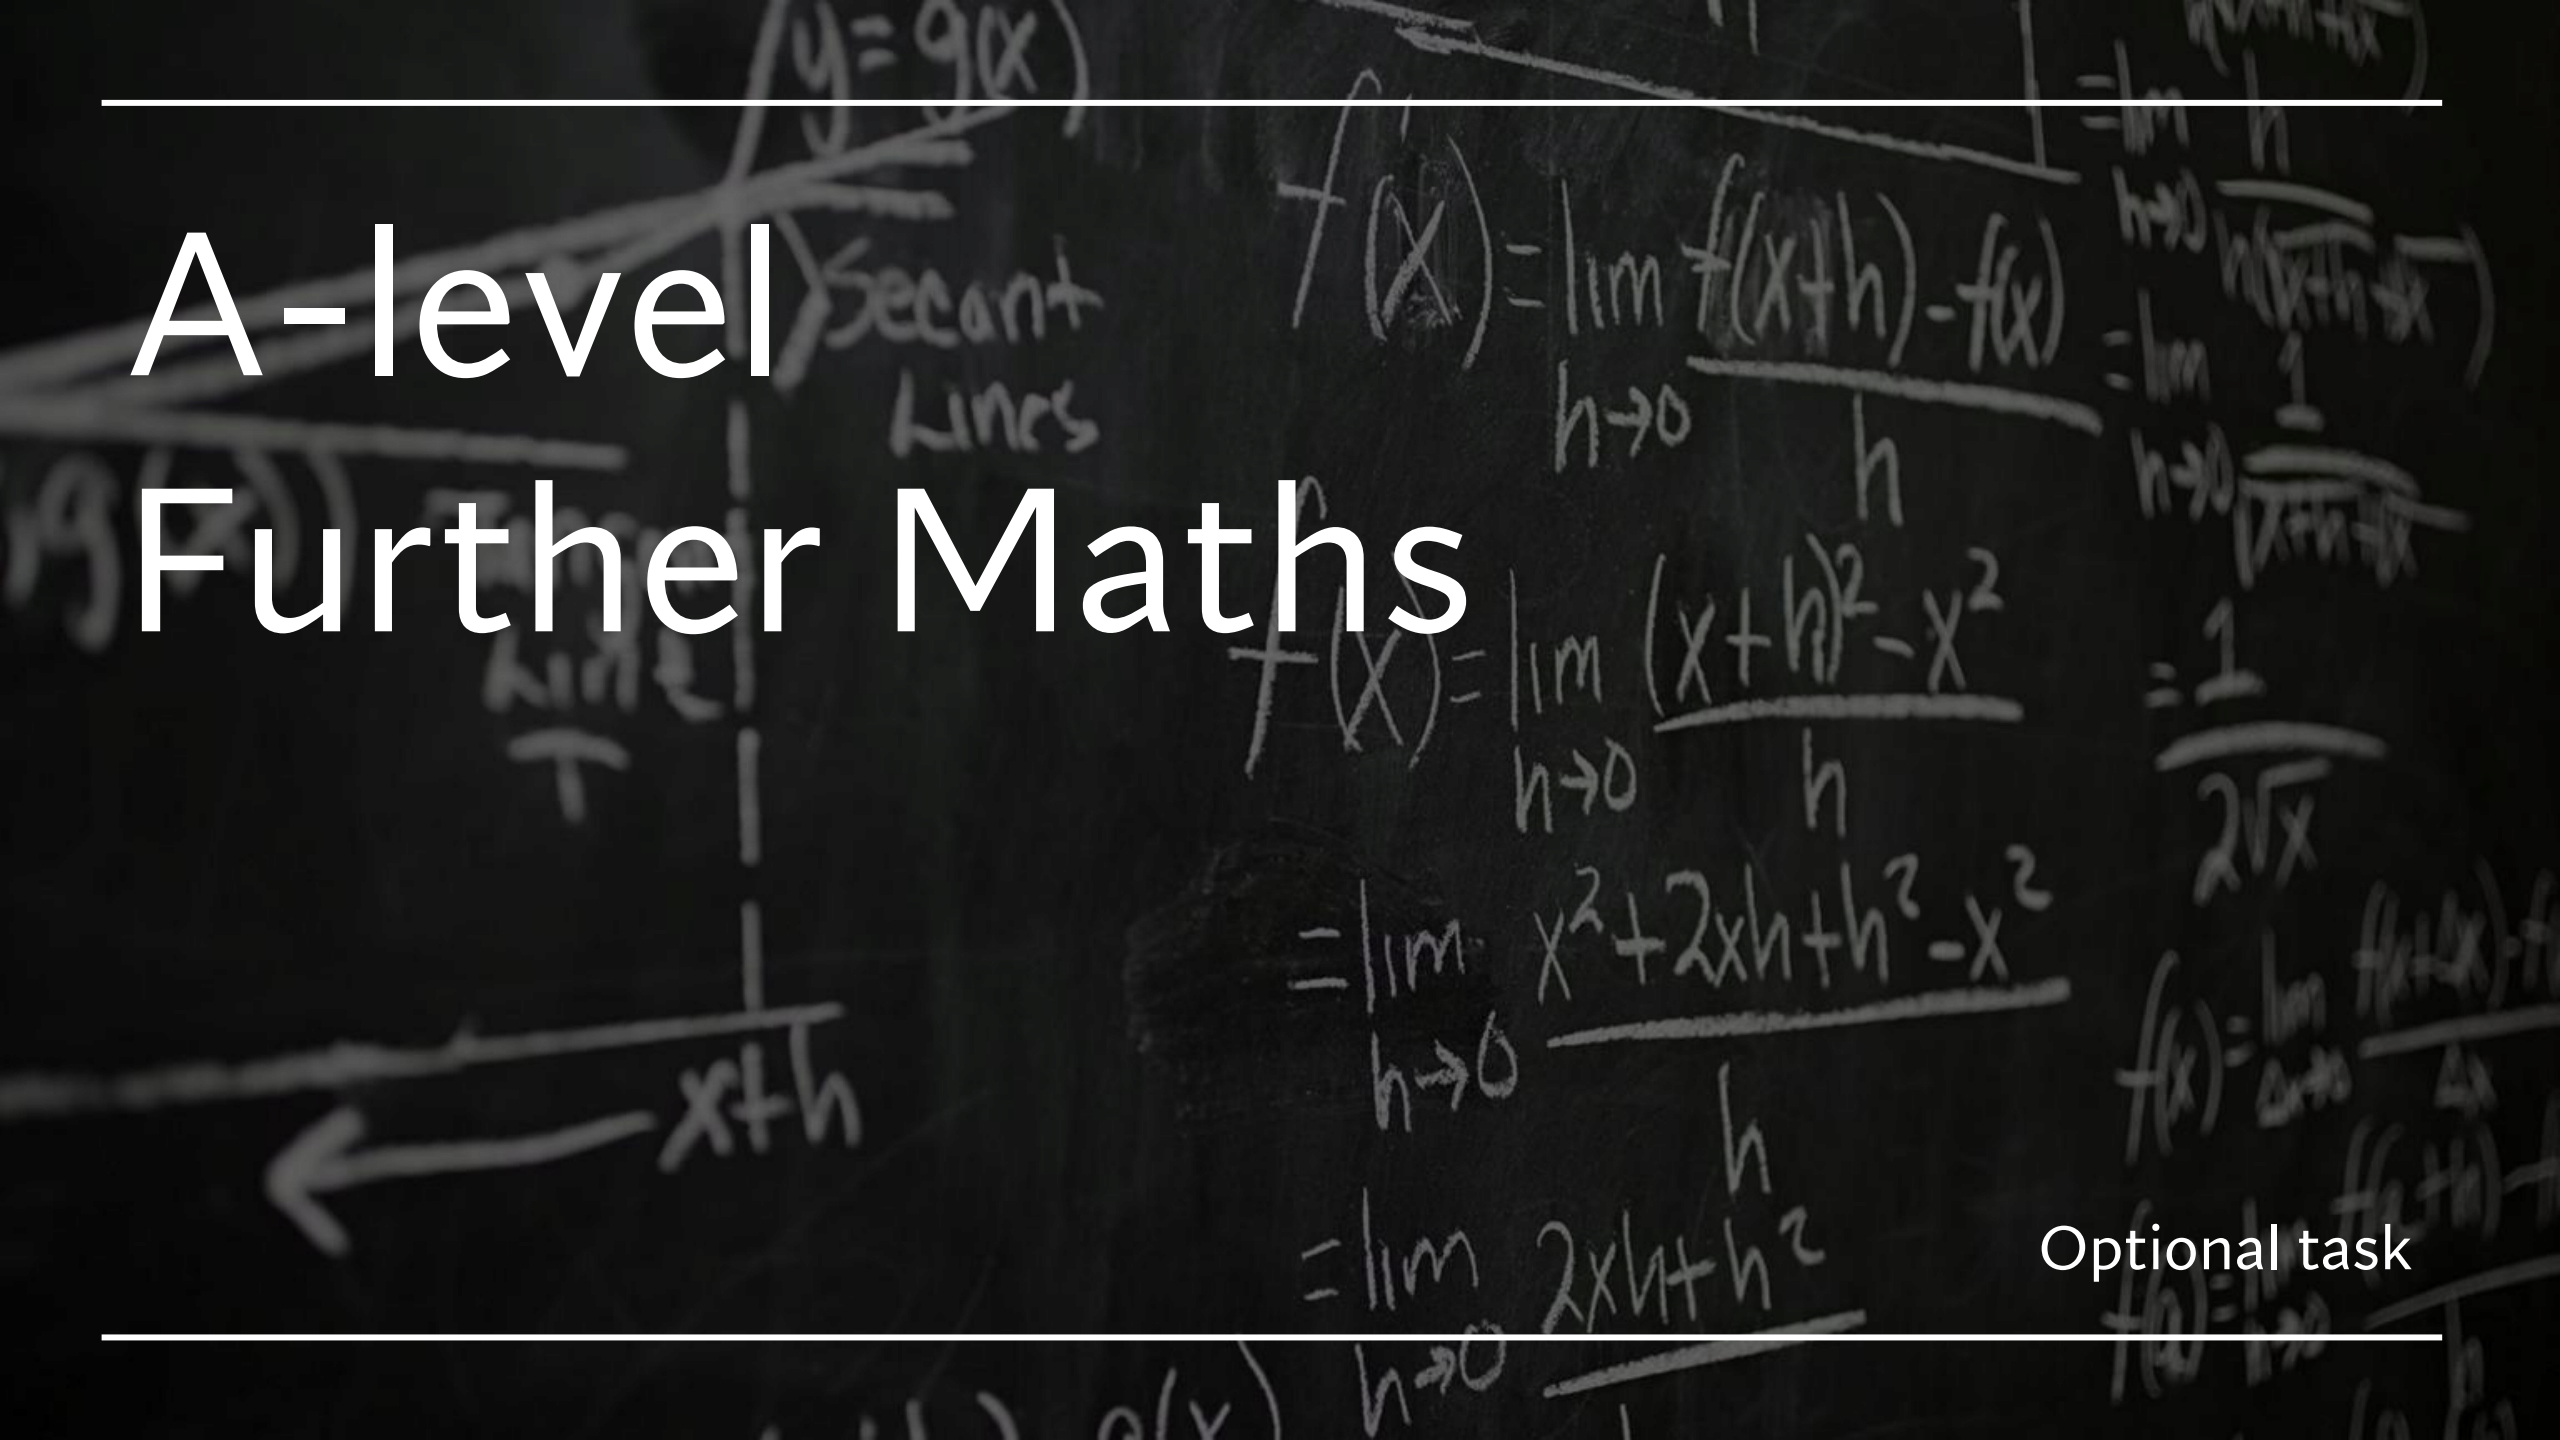

- What is a radian?
- Converting between degrees and radians

Now work through the Further Maths task on radians.

Please **complete and mark** your work in a notebook or on A4 paper which you can hand in when you arrive at your first lesson in September.

Please **don't** complete your transition task for all your subjects in the same book as we will want to take in your work for checking.

A-level Further Maths

The background is a dark, textured image of a chalkboard filled with handwritten mathematical notes in white chalk. The notes include various mathematical expressions related to differentiation, such as $y = g(x)$, $f(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$, $f(x) = \lim_{h \rightarrow 0} \frac{(x+h)^2 - x^2}{h}$, $= \lim_{h \rightarrow 0} \frac{x^2 + 2xh + h^2 - x^2}{h}$, $= \lim_{h \rightarrow 0} \frac{2xh + h^2}{h}$, $f(x) = \lim_{\Delta x \rightarrow 0} \frac{f(x+\Delta x) - f(x)}{\Delta x}$, and $f(x) = \lim_{h \rightarrow 0} \frac{f(x+h) - f(x)}{h}$. There are also some diagrams and arrows, including one pointing left labeled $x+h$ and another pointing right labeled x . The text "Secant Lines" is also visible in the upper left area.

Optional task

-
- The next slides give solutions to the first few optional questions.
 - Do your best to answer the question before watching the solution.
 - If you are stuck, you could try watching the solution and pause it once you have enough of a hint to finish it off yourself!
 - Email dcrocker@coombedean.co.uk if you need more help.
-

(i) Simplify $\sqrt{50} + \sqrt{18}$.

(ii) Express $(3 + 2\sqrt{5})^3$ in the form $a + b\sqrt{5}$ where a and b are integers.

(iii) Expand and simplify

$$(1 - \sqrt{2} + \sqrt{6})^2.$$

(iv) (a) Expand and simplify $(1 + \sqrt{2})^2$.

(b) Find all real values of x that satisfy

$$x^2 + \frac{4}{x^2} = 12.$$

Leave your answers in the form of surds.

04 June 2023 18:24

1

(i) Simplify $\sqrt{50} + \sqrt{18}$.

(ii) Express $(3 + 2\sqrt{5})^3$ in the form $a + b\sqrt{5}$ where a and b are integers.

(iii) Expand and simplify

$$(1 - \sqrt{2} + \sqrt{6})^2.$$

(iv) (a) Expand and simplify $(1 + \sqrt{2})^2$.

(b) Find all real values of x that satisfy

$$x^2 + \frac{4}{x^2} = 12.$$

Leave your answers in the form of surds.

- (i) Solve the equation:

$$\frac{2}{x+3} + \frac{1}{x+1} = 1.$$

- (ii) Find the value(s) of b for which the following equation has a single (repeated) root.

$$9x^2 + bx + 4 = 0.$$

- (iii) Find the range of (real) values of c for which the following equation has no real roots:

$$3x^2 + 5cx + c = 0.$$

2

(i) Solve the equation:

$$\frac{2}{x+3} + \frac{1}{x+1} = 1.$$

(ii) Find the value(s) of b for which the following equation has a single (repeated) root.

$$9x^2 + bx + 4 = 0.$$

(iii) Find the range of (real) values of c for which the following equation has no real roots:

$$3x^2 + 5cx + c = 0.$$

3*

In this question a and b are distinct, non-zero real numbers, and c is a real number.

- (i) Show that, if a and b are either both positive or both negative, then the equation

$$\frac{x}{x-a} + \frac{x}{x-b} = 1$$

has two distinct real solutions.

- (ii) Show that, if $c \neq 1$, the equation

$$\frac{x}{x-a} + \frac{x}{x-b} = 1 + c$$

has exactly one real solution if

$$c^2 = -\frac{4ab}{(a-b)^2}.$$

Show that this condition can be written

$$c^2 = 1 - \left(\frac{a+b}{a-b}\right)^2$$

and deduce that it can only hold if $0 < c^2 \leq 1$.
